

General Make & Production System

**Agile software-development
with a concept**

Situation today

- Agile development is hard to implement
- Lot's of different tools and versions are used
- Every developer has to set up and maintain his own Build Environment
- New team members have to be trained to understand the build process
- Different build results
- Time consuming

Situation with

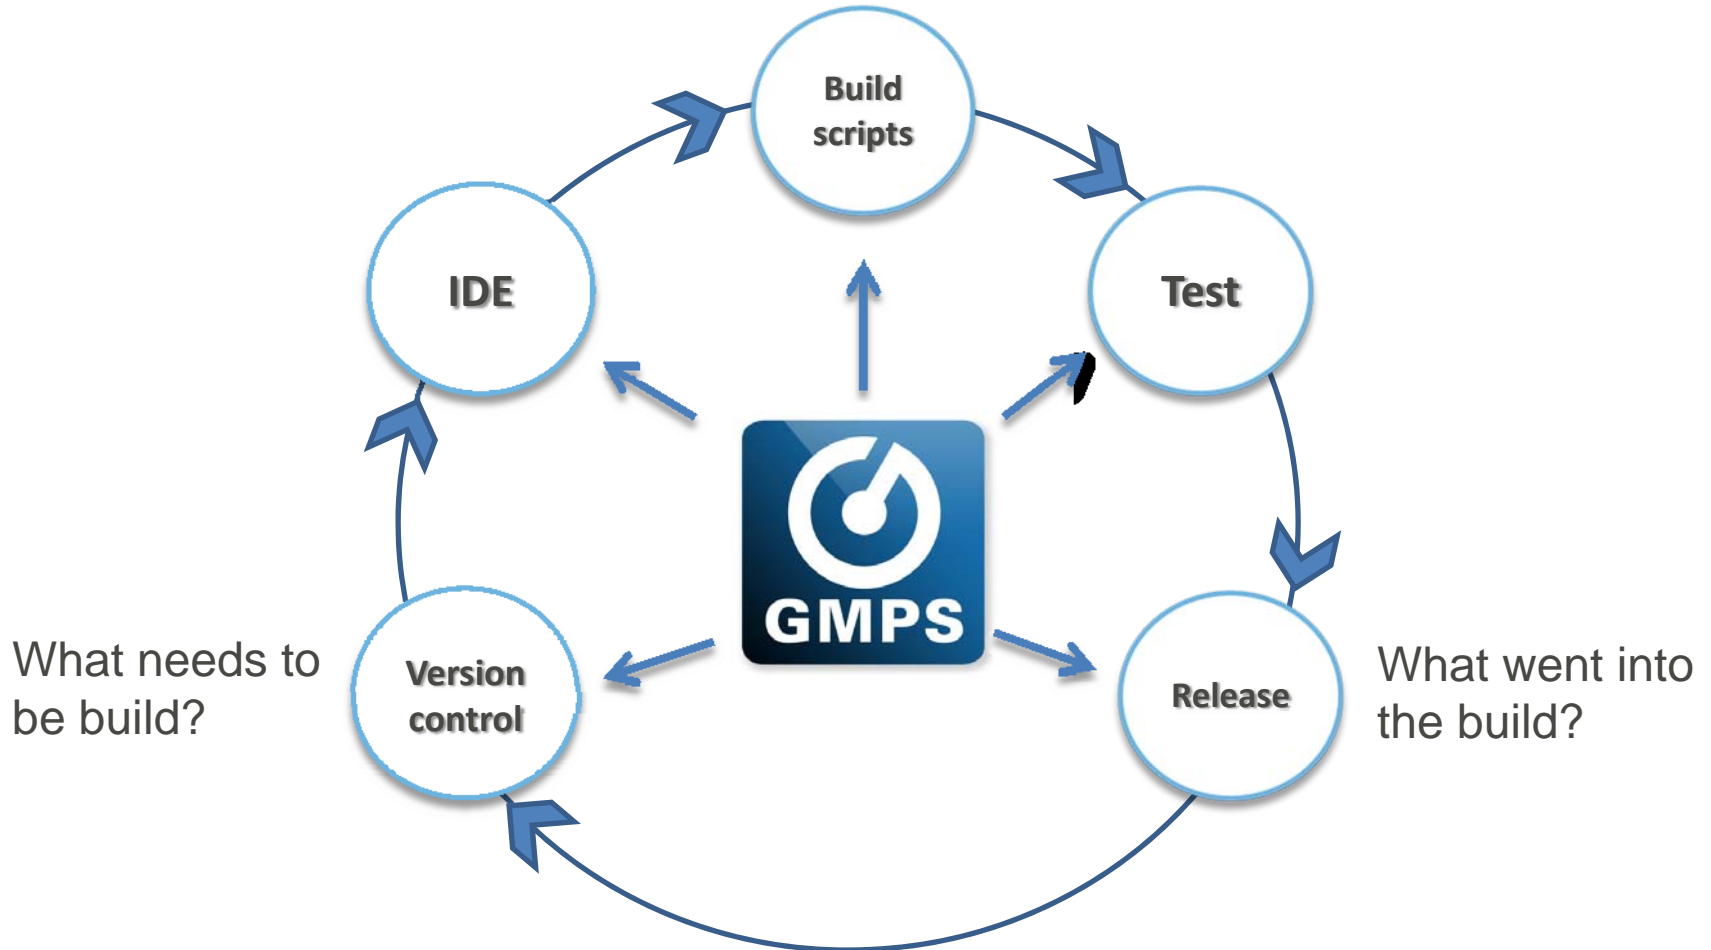

- Easy set up the of the general production environment
- Standard build for the developer
- Agile development is possible
- Different build results are comparable

GMPS provides benefits through

- the proven concept for a state-of-the-art production
- the independency from different technologies
- the centralized administration for Builds
- the automated generation of the necessary make files
- the automated error reporting

GMPS crosses the gap

How do you
build the software?

Benefits for the Development teams

- 50% cost saving for administration during the project time
- 80% cost saving to set up a project production environment
- Stable agile development is possible
